Roughly two thirds of home fire deaths happen in homes with no smoke alarms or no working smoke alarms.

Smoke alarms should be **installed** on every level of the home, outside each sleeping area and inside each bedroom.

Working smoke alarms reduce the risk of dying in a home fire by **half!**

Replace smoke alarms **10** years from the date of manufacture.

* NFPA reminds you

**SMOKE ALARMS SAVE LIVES.**

For the best protection, **interconnect** all the smoke alarms so when one sounds, they all sound.

* Test all smoke alarms at least **once a month** by pushing the test button.

When the smoke alarm sounds, get **outside and stay outside**.

Go to your **outside meeting place.** **Call the fire department** from a cell or neighbor’s phone. Stay outside until the fire department tells you it is safe to go back inside.
